

NIAGARA PRODUCT CATALOG | MIDDLE EAST

2021-2022

WELCOME TO THE WATER REVOLUTION. WE SAVED YOU A SEAT.

Niagara Conservation[™] is a prime global source for energy and water conservation products and programs worldwide. Unlike our competitors, we are a vertical manufacturer that has grown our company and facilities to provide you the highest quality products with the best conservation technology available.

The Niagara name has become synonymous with innovative conservation for a growing customer base of utility companies, government leaders, energy management officials, and eco/cost-concsious homeowners and developers.

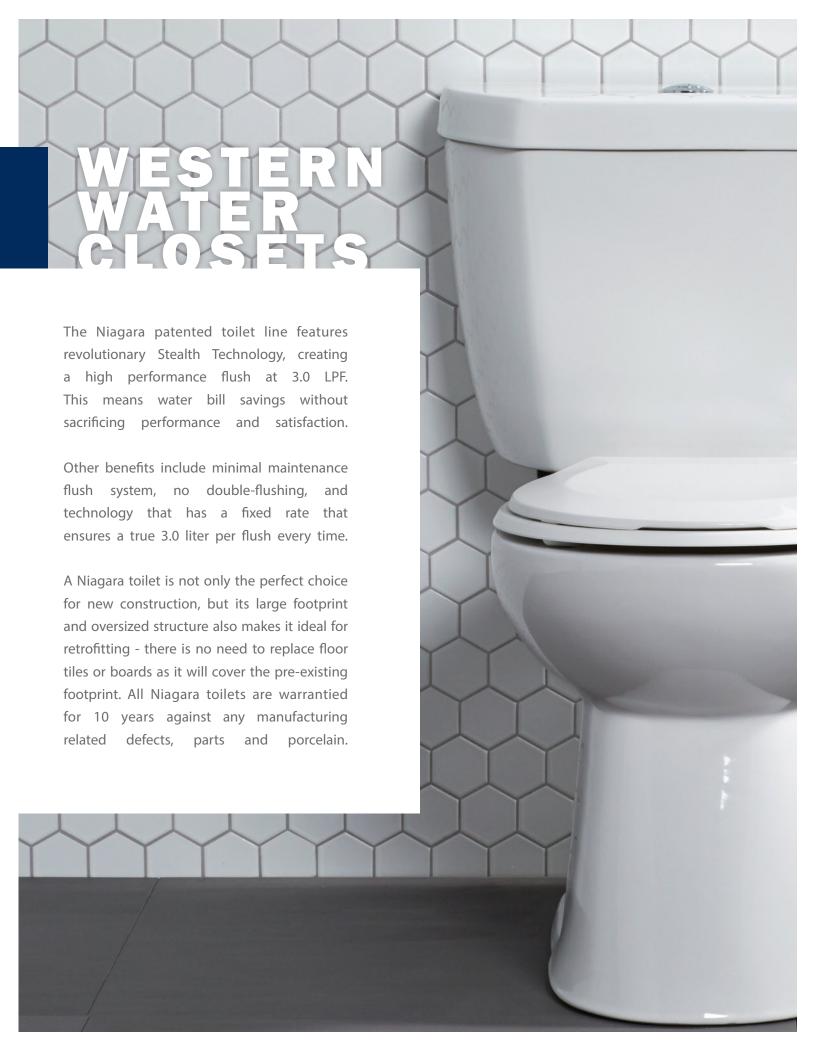

Today - as climate change, population growth, and record droughts present an unprecedented strain on our water supply - we are doubling down on our purpose and pushing our technology to invent ways for our customers to go from mindless waste to mindful conservation.

TECHNICAL INFORMATION	124

Before the flush...

- Water begins to refill the inner chamber and the tank surrounding it.
- 2 As water fills the inner chamber, it pushes air into an air transfer tube.
- 3 Air leaves the transfer tube and pressurizes the trapway.
- Air pressure exerted on the "bowl side" of the trapway creates a larger water surface.

During the flush...

- When the flush button is pressed, water leaving the tank forces water through the openings in the side and front of the bowl rim.
- 2 Water flows down through the bowl, thoroughly rinsing
- Water leaves the tank and enters the trapway under pressure.
- As water leaves the inner chamber, it pulls air from the trapway into the transfer tube.
- Air leaving the trapway creates a vacuum, exerting a pull that accelerates the force of water flowing through the trapway.

Niagara Conservation combines the finest materials with unique designs in order to fulfill our customers' demands.

Kitchen and bathroom aerators represent a significant portion of your home's water consumption. Niagara's high-efficient aerators cut water usage and reduce utility bills with patented pressure-compensating EquiforceTM Technology.

This technology helps you save thousands of gallons of water a year without sacrificing pressure or performance. Equiforce Technology is built into each of our aerators to maintains a constant flow regardless of water pressure by regulating the amount of water that flows at higher pressures.

Niagara's Equiforce[™] Technology is a pressure-compensating technology that guarantees a powerful, consistent water output regardless of pressure.

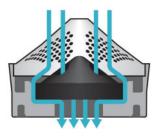

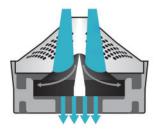

PRESSURE-COMPENSATING DESIGN

Niagara's patented pressure-compensating technology, Equiforce™, is built into each of our showerheads and aerators. It has revolutionized water flow by providing constant water output regardless of the available water pressure. The flow is maintained by a flexible plastic disc that regulates the amount of water that flows through the showerhead or aerator.

HOW IT WORKS

- At low pressure, water is allowed to flow through three holes in the center of the compensator around the scallop cutouts on the edges.
- As water pressure increases, the force presses down on the compensator, causing it to flex.
- As it flexes, the scalloped cuts seal off, allowing water to only flow through the center holes.
- As water pressure increases further, the compensator continues to flex and the shape of the holes distort, reducing the size of the openings. This further controls the amount of water that flows through them. The shape and hardness of the rubber helps maintain a level flow rate as the pressure increases.

Note: Items in this section without the Equiforce[™] logo do not include this technology

SHOWER HEADS, RAIN SHOWERS, AND SLIDING RAILS

Showerheads represent another significant portion of your home's water consumption. Niagara's high-efficient showerheads cut water usage and reduce utility bills with patented pressure-compensating Equiforce™ Technology.

This technology helps you save thousands of gallons of water a year without sacrificing pressure or performance. Equiforce Technology is built into each of our showerheads to maintains a constant flow regardless of water pressure by regulating the amount of water that flows at higher pressures.

Niagara's showerheads are the ultimate highefficiency product. Unique designs coupled with Equiforce Technology allows for a more enjoyable shower. Enjoy a shower longer without the guilt of wasting as much water as a traditional showerhead.

Note: Items in this section without the Equiforce™ logo do not include this technology
